Art Unit: 3747

Claims 6-8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. In particular, the applicant has provided no drawings or a detailed enough disclosure for one of ordinary skill in the art to make or use the invention. There are no drawings to show how a pressure valve is located within the banjo bolt of the invention nor is the pressure valve shown so one can determine what type of pressure valve is being claimed. Also, the air relief opening is not shown or adequately described.

Claims 7 and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In particular, these claims are dependent upon cancelled Claim 1.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Betz in view of Channing ('741).

Betz teaches air bleed holes (44) which appear to be part of a banjo bolt assembly including a return line for an injection pump. No pressure-regulating valve is

shown but, as shown by Channing, such internal regulating valves are commonly positioned within an injection pump housing (see Figure 2). As noted previously, applicant's method of locating his valve within the banjo bolt is unclear so this limitation has still been given no weight at this time.

It would have been obvious to modify Betz by placing a regulator in the injection pump housing as taught by Channing since it is almost always necessary to regulate either fuel pump or injection pump pressure output.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Betz and Channing as applied in Claim 6 above and further in view of Constantine.

Constantine applies as per the rejection of Claim 1 in the last office action.

Applicant's arguments filed April 7, 2005 have been fully considered but they are not persuasive.

In particular, applicant has not really responded to the rejections of the last office action and has merely written the new claims in better form than the original claims. For this reason the original rejections under 35 U.S.C. 112 second paragraph have been withdrawn but the original art rejections remain.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 3747

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
